Installation/ Configuration Requirements

To install and configure the Connect Bridge Software in your environment we will need:

- Windows Machine (32 or 64 bits – XP or later – recommended win7 for dev – win2008 server or later for production) with Internet connection (http/https protocols – Digital Verisign Certification checking). Not strictly necessary but recommended
- In the Windows Machine the pre-requisites installed: .NET Framework 3.5 and .NET Framework 4.0 full version (Client Profile + Extended)
- Windows Firewall Inbound/Outbound rules allowing the default ports 8087, 9087, 8085 (not necessary but recommended)
- Network connectivity to the target systems (Exchange, SharePoint, Dynamics CRM, Dynamics NAV, etc) via http/https protocols
- Installation package of Connect Bridge Software to be provided either during the presentation or before via download link

Hardware Requirements

The hardware requirements depend on the installation scenario.

A client machine (Minimum Recommended):
- 100 MB of disk space for the full installation
- 50 MB of disk space for drivers and client tools alone
- 1 GB RAM

A server (Minimum Recommended):
- HDD 500 MB (installation requires ~ 90 MB of free disk space)
- 2 GB RAM
- Required disk space grows according to the number of installed CB Connectors and the number of opened connections
